

Developer's name (person whose project is being reviewed)	Chase Klotter
Web site title:	"Dam-archy" in the USA
Reviewer's name (you)	Ashley Bakker
Date:	8/16/2023

Instructions

Use this form to review the beta version of a term project completed by another student. After completing this review form, upload it to the Beta Review Forum so your lab partner can download it and read it.

Reviewer: Just enter yes or no in the "Beta" column. Be sure to write comments as well.

Developer: After getting this back from the reviewer, fix any problems, and fill out the "Prod" (Production) column. Upload this completed form to Moodle with your final project.

Criteria	Beta	Prod.
Is the audience for the site clear?	yes	Yes
If someone gets to the front page by mistake, would they immediately leave?	no	No
If someone is interested in the site's content, would they stay and explore the site? Explain: There is a lot of good information and photographs about the topic, which many (including myself) may not know much about.	yes	Yes
<i>Comments on audience and site navigation:</i> The audience seems to be targeted towards a lot of people, specifically to inform Oregon residents about dam removals, so that part is clear. The site is easy to navigate with the nav bar, would possibly move it to the top above the "Dam-archy" and page headers to connect that blurb with the body better. The navigation button titles are a bit confusing though, I'm not sure what they exactly lead to until I click them and read the page's header except for personal experience and history. Just would make the first two more specific.		
Is the site aesthetically pleasing (including the color scheme)?	yes	Yes
<i>Comments on aesthetics:</i> The background, images and colors all work well together, if you are going to use purple I think you could use it in more areas like the front page with the colored section about your personal experience. This would make it more cohesive and easier to read the white text since you have a very textured background.		
<i>Requirements:</i>		
The project has at least 5 pages.	yes	Yes
Each page must have a distinct purpose.	yes	Yes
Each page has a header.	yes	Yes
The headers are consistent between pages.	yes	Yes
Each page has at least one section and one article.	no	Yes
Each page has a footer with the author's name, copyright, date of last revision, and any other appropriate information.	yes	Yes
The footers are consistent between pages.	yes	Yes
Each page has a navigation bar with links to the other pages.	yes	Yes
The navigation bars are consistent between pages.	yes	Yes
Each page has at least one paragraph of text or a table.	no	Yes
Each page has at least one heading element.	yes	Yes

There is one, shared CSS file.	yes	Yes
There is embedded CSS in at least one head element.	no	Yes
<i>Which page contains the embedded CSS? index.html</i>		
There are three figures (may be on separate pages).	yes	Yes
All images must have meaningful alt text for blind users.	yes	Yes
There is at least one table with at least 2 columns and at least 2 rows.	no	Yes
The table contains column headers.	no	Yes
Have good coding style and best practices have been used?	yes	Yes
Have descriptive comments been added to the code?	yes	Yes
<i>Comments on code quality:</i> Code looks pretty clean, there is some unnecessary whitespace and indentation, but nothing too extreme. The descriptive comments are very minor, not sure if it's up to project standards but I think it's okay.		
<i>Check the web site on citstudent</i>		
Can the web page be viewed in a browser at the appropriate URL for your site on citstudent?	yes	Yes
Do all the pages pass HTML validation?	no	Yes
Do all the stylesheets files pass CSS validation?	no	Yes
<i>Pages or stylesheets (if any) that failed validation:</i> HTML: <ul style="list-style-type: none"> • Home - Nested list error, I would check the Course Q&A forum under "Validator Error" on how to fix this :) • Elwha - <title> empty, <blockquote> can't be a child of h2, no starting tag for end </p> tag (not sure why it's saying this, possibly move the beginning <p> before blockquote to after it instead.) • Oregon, Personal Experience, History - <title> empty CSS: <ul style="list-style-type: none"> • Main-Style - border-width 1% is not a border-width value 		

Additional Comments:

I think your page looks great so far for being a beta! It looks like you got most of the requirements, I just had to say no on some due to your last two pages not having any content. If you struggle with the nested list, I think you could use a table for your notable dam removal projects, but that's just a recommendation if you don't know where to use a table. The background image you chose is very mesmerizing, that has to be my favorite part.
